

How do I reinstall the RBCA ToolKit?

Monday, 09 March 2009 02:16 - Last revised Wednesday, 01 July 2009

Reinstalling may sometimes be necessary. To reinstall:

1. You may wish first wish to copy your toxicity database (UserChemTox.xls) to another folder, in order to preserve your user-defined settings.
2. You can then delete all of the RBCA Tool Kit program files (there are seven).
3. Reinstall from the original media (CD, or zip file), if it was electronically delivered. You can then register the software as normal.
4. Make sure to replace the UserChemTox.xls file after you have completed reinstalling.
